

Spatial Eye simplifies your world

Spatial information wherever and whenever you need it

Location information is one of the most valuable types of information available. Location data is now created at an immense speed, by satellites circling around the world, by millions of GPS devices, through maps distributed over the Internet, by your engineers, etc.

The potential to use your valuable spatial information is immense. You can locate your friends or colleagues, you can see real-time where your properties are or get in integrated view of all your company assets.

Intelligent spatial information

Raw spatial data is useless. Just coordinates, pictures or simple maps don't give you the value you are searching for. You need spatial information adjusted to your requirements.

The Spatial Eye products allow you to:

- ▶ get a good, real-time overview of available data,
- ▶ link and share this data for optimal access and use,
- ▶ examine spatial data and all attached maps, images and documents,
- ▶ analyze and query your spatial data to find spatial patterns, spatial distributions, spatial processes and networks,
- ▶ present your data, maps and images within your working environment, in reports and publish them in a professional way,
- ▶ publish spatial data directly to other environments, like your middle-ware, Google Earth or Microsoft Office applications,
- ▶ and exchange spatial information between employees, customers and suppliers.

Spatial Eye offers spatial solutions that allow you to analyze, view, report or distribute spatial information, whenever you need it, wherever you need it and how you need it.

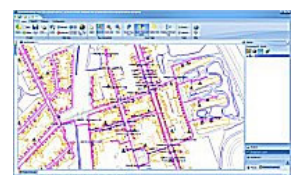

Spatial information in the way you like it

There are large numbers of raw data sources around. That is why integrating, aggregating and reshaping the available spatial data is key. Selections of information shaped into business objects that support your business processes offers the full potential of spatial information. Spatial Eye allows you to do just that.

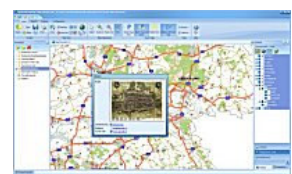

Spatial Eye offers products to model your spatial data to your needs and than integrate this information into your existing IT environments, like your ERP, CRM, DMS systems. The backbone of these capabilities is the Services Oriented Architecture of the Spatial Eye products.

Present your data

Explore combined data

Link your data

simplify your world

Spatial Eye solutions leverage your geo-spatial data

The Spatial Eye solutions leverage your geospatial data without constraints.

- ▶ Spatial Eye products eliminate the need transfer data between systems to analyze, view or report spatial information. You work with data directly from the sources where it is entered and maintained.
- ▶ You can select, combine and reshape data quickly into Spatial Business Objects that suite your needs.
- ▶ Spatial Eye products integrate maps and aerial photos provided on the internet with your own data.
- ▶ Spatial Eye products bring integrated information on the desk of everyone to use it as easy as a text editor.
- ▶ You can share your own business data internally or externally.
- ▶ Through integration into Workflow Management Systems you can optimize your business processes.

Spatial Workshop 2008

Spatial Workshop is the lead product set of Spatial Eye. With Spatial Workshop you access data on your computer, in databases or on the Internet and combine it and remodel it, so that you can integrate it into your business processes; whether in the office or in the field. Spatial Workshop gives you the ability to query and analyze your spatial data and present it in professional reports and high quality maps or publish your spatial data on Google Earth.

Spatial Workshop is based on the latest Microsoft technologies, like .Net, WF, WPF and WCF, which allows you to use, extend and maintain the system with standard tools. Spatial Workshop functionality is available as smart client, server or component based configurations.

Spatial Eye simplifies your world

Spatial Eye gives you an overview of your own world. Spatial Eye makes software that helps you to explore and use your spatial information in a simple way.

Partners throughout the world have chosen the Spatial Eye products to assist their customers to simplify their world.
