## SPATIAL WORKSHOP, SMALLWORLD, ORACLE AND GOOGLE EARTH

August 2007

*Google Earth is the tool to publish geographical data on the Internet or your Intranet.*

*Spatial Workshop is the tool to add value to the geographic information that you get from different sources. You can combine selected data from different feature sources, create new derived information, filter and build relations between data from different sources.*

*Combine the strength of Spatial Workshop and Google Earth to support your process of publishing spatial information to everyone, everywhere.*

### ● **SMALLWORLD AND ORACLE DATA AT YOUR FINGER TIPS**

#### **Integration of Smallworld and Oracle data via Spatial Workshop**

You are a Smallworld GIS user and are using Oracle or plan to do so. You have questions, like:

- where do I store which information,
- how to synchronize data between both systems,
- how combine data stored in both systems
- and how do I analyze the data in both and other systems in one go?

Spatial Workshop brings information from multiple sources to everyones desk; geospatial, raster, administrative and real-time data.
